 Abstract: Constituye una representación estructurada del conocimiento sobre la distribución espacial de diferentes clases de suelos y áreas misceláneas en el paisaje. Está conformada por una estructura digital de datos que contiene información acerca de la distribución geográfica y propiedades de la cobertura del suelo en un área específica.
 Purpose: Sirven para poder hacer predicciones acerca del comportamiento esperable de los suelos en una determinada zona y poder asignar de este modo usos al territorio y aplicar técnicas de gestión de suelos con una mayor base científica, para la planificación territorial, evaluación de recursos naturales, mejoramiento de la productividad y atención a desastres, entre otros.
